Approach and Methodology

#### Scope and Approach

#### **SCOPE OF WORK**

The scope of this facility condition assessment includes all major mechanical, electrical, and plumbing equipment, and commercial refrigeration equipment. In addition, the building enclosure, roofing, interior construction and finishes, and fire suppression systems are included within the assessment. Turf, site assets, kitchen assets besides walk-in freezers, exhaust fans and kitchen make up air units are not included in scope.

The following table lists the general asset types included within the scope of this assessment. Also shown is the corresponding Uniformat code, which has been used to catalog equipment based on type and intended use.

#### **UniFormat Classification of Building Systems**

UNIFORMAT CODE	CATEGORY DESCRIPTION
B20	Exterior Enclosure (i.e. windows, walls, doors)
B30	Roofing (i.e. roofing covering, skylights, etc.)
C10	Interior Construction (i.e. doors, walls)
C20	Interior Stairs (i.e. stair construction)
C30	Interior Finishes (i.e. flooring, ceiling finishes, etc.)
D10	Conveying (i.e., elevators)
D20	Plumbing (i.e., water heating, pumps, compressors)

D50	Electrical (panelboards, transformers, switchgear)
E10	Equipment, Kitchen Hoods, Walk-in Units, etc.

#### RATINGS, METHODS AND SCORING

To allow Poudre School District more flexibility in prioritizing capital planning efforts, McKinstry has developed the following metrics which assign various scores to each asset.

#### **Asset Condition**

Condition ratings are presented for each asset as a score of 1-5. Scores are based upon a visual inspection during the building evaluation period. A score of 1 signifies that the asset is in great, "like new" condition. A score of 2 indicates that the asset is in good condition. A score of 3 signifies that the asset is in expected "average" condition based on function and the age of the asset. A score of 4 signifies that the asset is in poor condition, in need of repair, and will require replacement in the near future. A score of 5 signifies that the asset is in very poor or failed condition and in need of imminent replacement.

SCORE	CONDITION ASSESSMENT				
1	Asset is in great condition, no action required.				
2	Asset is in good condition, regular maintenance expected.				
3	Asset is in expected condition, regular replacement/maintenance expected.				
4	Asset is in poor condition, maintenance/replacement recommended soon.				
5	Asset is in very poor condition, urgent replacement needed.				

#### **Student/Teacher Impact**

Student/Teacher Impact scores are presented for each asset on a scale of 1-5 (low to high impact). This metric considers educational (student and/or teacher) impact caused if the equipment were to fail. Assets serving classrooms and other educational spaces are assigned scores of 2-5 depending on the impact the failure of an asset would have and if backups are available. A student/teacher impact score of 1 indicates that there is little to no impact to educational activities.

SCORE	STUDENT/TEACHER IMPACT			
1	Failure poses no significant educational impact.			
2	Failure poses low educational impact.			
3	Failure poses moderate impact. Asset serves teaching area, but has backup.			
4	Failure poses high educational impact.			
5	Failure poses severe impact. Asset serves teaching area and has no backup.			

#### **Energy Cost Impact**

The Energy Impact score is presented for each asset on a scale of 1-5 (low to high impact). Each of the asset types within the scope of this assessment were evaluated based on their impact to energy cost and consumption (including electrical, natural gas, and liquid fuels). Assets with a higher Energy Cost Impact score indicate that the asset has a large contribution to the overall energy costs of the facility. A sample of Energy impact scores is shown below:

ASSET TYPE	ASSET SIZE	ENERGY COST IMPACT (1-5)

#### **Operational Impact**

Operational Impact scores are presented for each asset on a scale of 1-5 (low to high impact). This metric considers the operational impact caused if the equipment were to fail. Assets serving critical administrative and district operational spaces are assigned scores of 2-5 depending on the impact the failure of an asset would have and if backups are available. An operational impact score of 1 indicates that there is little to no impact to administrative or operational activities.

SCORE	OPERATIONAL COST IMPACT SCORE				
1	Asset has little to no operational impact.				
2	Asset has a low level of operational impact.				
3	Asset has a moderate operational impact.				
4	Asset has a high level of operational impact.				
5	Asset has severe operational impact.				

#### **Industry Life Expectancy**

The designed life expectancy for a given asset is determined using a combination of widely accepted industry standards including ASHRAE and BOMA, as well as a manufacturers' database of equipment life expectancies. This value is expressed in number of years.

#### **Observed Remaining Life**

The Observed Remaining Life is also expressed in number of years and takes into consideration the function and operating environment of the asset, as well as a determination based upon a visual inspection of the asset. The Observed Remaining Life value may vary from the Design Life value. For example, a secondary heat exchanger that has been well maintained may have an Observed Remaining Life that is greater than the expected Design Life. Likewise, a primary chilled water pump that has not been well maintained, and shows visual signs of premature wear and tear, may have an Observed Remaining Life that is less than the expected Design Life.

#### **Cost Estimating**

Based on the constraints of the scope outlined in the contract we have based our asset pricing upon industry standards, RSMeans, and pricing data sourced through McKinstry's construction division. This information is intended to assist in the prioritization and resource allocation associated with maintenance and capital replacement projects. Cost estimates are determined using specific characteristics of each asset (tonnage, motor size, capacity, etc.) along with one of several cost information data sets. Standard equipment warranties are included.

To clarify, all Estimated Replacement Costs include averages of the material cost of the asset, the demolition and installation of that asset type and are expressed in 2023 dollars. Additionally, site specific construction and equipment invoices have been utilized as available.

Costs associated with project design, contractor competence, commissioning, test and balance services and are excluded from the estimate and are the responsibility of the Client. McKinstry assumed a 3% inflation, applied year over year. All work is during normal business hours. For mechanical equipment any duct work, piping, existing appurtenances are to be reused; costs to repair or replace any lines going to or coming from the units is excluded. Existing isolation valves to be used; repair or replacement of isolation valves is excluded.

Costs typically associated with project-specific parameters are excluded and should be added at the discretion of the Client. Such exclusions include risks or contingencies such as asbestos abatement, other hazardous waste abatement, scope changes, design changes, taxes, special wage requirements such as Prevailing Wage rates, warranty management and unknown site conditions. Overtime and after-hours work is excluded. Any necessary structural or electrical upgrades to replace equipment is excluded. Incidental code violations resulting from project scope or execution are excluded. Correction of any existing code violations are excluded. Temporary heating, cooling, ventilation, and power during construction and the warranty period are excluded. Moving of heavy equipment or furniture to complete the work is excluded. Running and terminating new IP drops for equipment is excluded. Any changes to fire and life safety systems for mechanical equipment upgrades is excluded.

#### **Data-Driven Maintenance Approach**

Included with the submission of this report is the FCA Data Collection Workbook, which includes all data collected for each asset. The Workbook can be used to quickly sort through equipment and prioritize maintenance and replacement efforts. Additional observations and equipment details are provided within the workbook for each asset.

Each asset is classified according to building system, size, capacity, and other standards, as well as ratings of current condition and impact of failure. Such organization and classification facilitate searching and sorting the data for maintenance and replacement priorities. As mentioned, the impact ratings help to compare one asset to another. Based on observed condition and impact scores, the future maintenance priorities for each building are described further in later sections.

As each of the components identified in the workbook is repaired or replaced, the information can be revised to reflect the new conditions. Remaining useful life values can also be manually iterated one year from the assessment date to reflect fewer remaining years of life. Assets no longer in service can be removed from the list. Similarly, assets that have been newly installed can be added to the list. Following the impact guidelines, relative priority can be calculated for these assets.

#### **Equity Index**

As an additional metric to the six existing areas of the Facilities Condition Assessment, Poudre School District has created an Equity Index to assist in prioritizing facilities improvement projects. This number takes into account student poverty, students qualifying for ELA services, students qualifying for Special Education services, and students who are homeless. The calculated score for each school is based on these factors and where it falls in relation to the district average. The formula would be:

School Percentage in these areas added together as decimals

District Percentages in these areas added together as decimals

In this formula, a school with student needs equal to the district average would have an equity index of 1.0. Schools with student needs higher than the district average would have an Equity Index greater than 1.0. Schools with student needs less than the district average would have an Equity Index less than 1.0.

Category	Equity Index
Low	0.29
High	3.20
Average	1.11
Median	0.95

The equity index for Fort Collins HS is 1.01.

# Condition Assessment

#### SYSTEMS DESCRIPTION

This section summarizes the building systems at Fort Collins HS and describes the general condition observed based on the assessment. Specific findings and recommendations are detailed later in this report.

#### **Exterior Enclosure**

The original building was constructed in 1995. Subsequent renovations to the school were completed in 1996, 1997, 1999, 2001, 2006, 2008, and 2012. Exterior walls are primarily of brick, CMU, and metal clapboard panel construction. Windows are of the aluminum framed type. Exterior doors consist of hollow metal and storefront types. E

#### Roofing

Original 1995 ballasted roofing is present on the majority of the building. Sections of EPDM were replaced in 2013. Metal flashing and skylights are original. The ballasted roofing is 8 years past expected useful life, and is expected to require replacement within three years.

#### **Interior Construction and Finishes**

The interior construction components of the building, including drywall and concrete masonry unit (CMU) walls are original. The interior doors are primarily of the wood and hollow metal type. All interior construction assets date to the 1995 original construction. Also, all interior finishes are original to the 1995 construction, with carpeting, VCT flooring, and hardwood flooring being well past expected useful life.

#### Conveyance

A single passenger elevator is provided and serves the two floors of the building.

#### **Electrical and Lighting**

The building includes both 120/208V and 277/480V service. Electrical assets, including panelboards, transformers, MCCs, and the main switchboard date to 1995. Most of the VFDs have been replaced 2016-2023, but VFD-HWP-1 and VFD-HWP-3 are original and outdated. The back-up generator is original, needing replacement in 6 years. Emergency back-up lighting dates to 1995, as does the majority of the building's interior fluorescent lighting fixtures. Recommend replacement of the remaining fluorescent lighting fixtures with LED lighting fixtures in approximately 2 years. The fire alarm system and the security system were both updated in 2012.

#### **HVAC Systems**

HVAC assets include (18) air handling units, exhaust fans, duct heating units, cabinet unit heaters, and VAVs with Reheat Coils. During inspection a single hydronic chiller and an associated cooling tower were staged to be newly installed. The heating water system features three gas-fired boilers with associated circulation pumps. The boilers are expected to require replacement within 8 years,

The BAS was updated in 2012.

#### **Plumbing**

Plumbing assets include three gas-fired water heater, backflow preventers, circulation pumps, a chemical treatment system, and one water filtration unit. Three of the BFPs are original and past expected life.

#### **Fire Suppression**

The fire alarm system was updated in 2012. The wet fire sprinkler system dates to the 1995 original construction, but sprinkler heads were replaced in 2013. The Fire Protection System appears to be well maintained and updated per fire code requirements. No deficiencies were noted with this system.

#### **Equipment**

The Kitchen area is provided one walk-in cooler and one walk-in freezer with associated condensing units. Both units are original to the 1995 construction and are expected to require replacement in approximately 7 years.

#### **PRIORITIES**

#### **SPECIFIC PRIORITIES**

The top capital measures (up to five max) have been detailed in the following tables. Each measure receives a priority level of 1, 2, or 3. A priority level of 1 indicates that the measure is considered an immediate concern or a potential hazard and should be addressed as soon as possible. A priority level of 2 indicates that the measure is considered urgent, but not a potential hazard or there is a less severe impact to occupants. A priority level of 3 indicates that the assets associated with the measure are nearing end of life, but have not yet failed or have a mild to moderate impact on occupant safety and comfort.

#### Fort Collins HS

#### Replace BP-1, B-2, & BP-3

. All three pumps are original 5 Hp

pumps that are 9 years past expected life. Significant rust and leakage were observed on all three pumps.

**Priority Level: Estimated Cost:** \$35,700

Remaining Life:

1 Year

#### Replace VFD-HWP-1 & VFD-HWP-3

VFD-HWP-1 and VFD-HWP-3 are original 1995-built 20 Hp VFDs that are 8 years past expected life. VFD-HWP-2 was replaced in 2020 due to failure. Recommend that these VFDs be replaced at least prior to the 2024-2025 heating season if not before.

The following assets are included within this measure:

FCAID-200535, FCAID-200537

**Priority Level:** 2 **Estimated Cost:** \$14,200

#### **Replace Air Handling Units**

Of the 18 original 1995-built AHUs there are 5 that require replacement within two year's time: AHU-11, AHU-12, AHU-13, AHU-17, and AHU-18 (total cost to replace these 5 AHUs = \$2,239,650). AHUs 1-10, 14-16 are also original but were observed to have approximately 7 years of remaining life (total cost to replace these 13 AHUs = \$5,332,510). Replacement Cost below includes all 18 AHUs.

Though 28,655 SF of interior lighting space received an upgrade to LED fixtures in 2022 that vast majority (257,897 SF) of the building is served by original 1995 fluorescent fixtures. Recommend that interior fluorescent fixtures (now 8 years past expected life) be replaced with LED fixtures within two years.

The following assets are included within this measure:

FCAID-200448

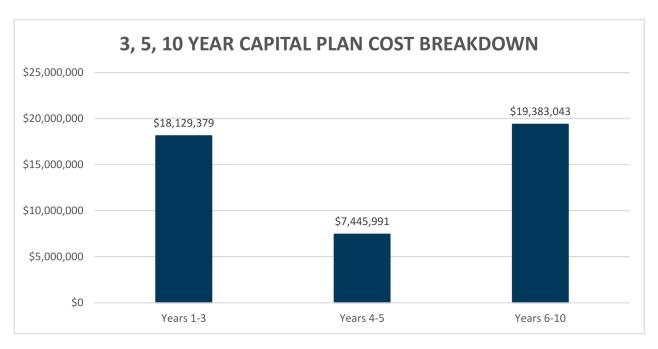

Priority Level: 3
Estimated Cost: \$3,868,460

#### **PRIORITY SUMMARY**

The summary below assigns a composite Overall Priority Score to the campus as of the assessment date. Priority Scores range from 6 (low priority) to 30 (high priority), and are based on asset condition, operating impact, student impact, energy impact, estimated replacement cost, and observed remaining life.

In addition to the Overall Priority Score, each Subsystem category within the site is assigned a Priority Score. This score can differentiate systems that may need more attention than others, due to condition or impact on occupants or operations. Each Subsystem category includes a general narrative section under the Description column.

#### **Future Capital Plan**

The Subsystem scores are color coded to reflect the level of priority: ≤12 = Green, 12.1-23.9 = Yellow, ≥24 = Red. Higher priority scores indicate that a system should be considered for maintenance or capital improvements before other systems with lower scores. The rating scale for Priority Score is visualized below.

Exterior walls are primarily of brick, CMU, and metal clapboard panel construction. Windows are of the aluminum framed type. Exterior doors consist of hollow metal and storefront types	16.5			
B30 - Roofing	Original 1995 ballasted roofing is present on the majority of the building. Sections of EPDM were replaced in 2013. Metal flashing and skylights are original. The ballasted roofing is 8 years past expected useful life, and is expected to require replacement within three years.	16.7			
C10 - Int. Construction	The interior construction components of the building, including drywall and concrete masonry unit (CMU) walls are original. The interior doors are primarily of the wood and hollow metal type. All interior construction assets date to the 1995 original construction. Also, all interior finishes are original to the 1995 construction, with carpeting, VCT flooring, and hardwood	13.4			
C30 - Interior Finishes	flooring being well past expected useful life.	18.2			
D20 - Plumbing	Plumbing assets include three gas-fired water heater, backflow preventers, circulation pumps, a chemical treatment system, and one water filtration unit. Three of the BFPs are original and past expected life.	12.4			
D30 - HVAC	HVAC assets include (18) air handling units, exhaust fans, duct heating units, cabinet unit heaters, and VAVs with Reheat Coils. During inspection a single hydronic chiller and an associated cooling tower were staged to be newly installed. The heating water system features three gas-fired boilers with associated circulation pumps. The boilers are expected to require replacement within 8 years,  The BAS was updated in 2012.	19.9			
D40 - Fire Suppression	The fire alarm system was updated in 2012. The wet fire sprinkler system dates to the 1995 original construction, but sprinkler heads were replaced in 2013. The Fire Protection System appears to be well maintained and updated per fire code requirements. No deficiencies were noted with this system.	22.0			
D50 - Electrical	The building includes both 120/208V and 277/480V service. Electrical assets, including panelboards, transformers, MCCs, and the main switchboard date to 1995. Most of the VFDs have been replaced 2016-2023, but VFD-HWP-1 and VFD-HWP-3 are original and outdated. The back-up generator is original, needing replacement in 6 years. Emergency back-up lighting dates to 1995, as does the majority of the building's interior fluorescent lighting fixtures. Recommend replacement of the remaining fluorescent lighting fixtures with LED lighting fixtures in approximately 2 years. The fire alarm system and the security system were both updated in 2012.	23.0			
E10 - Equipment	The Kitchen area is provided one walk-in cooler and one walk-in freezer with associated condensing units. Both units are original to the 1995 construction and are expected to require replacement in approximately 7 years.	15.0			

System priority scored from 6 (lowest priority) to 30 (highest priority) based on condition, operating impact, student/teacher impact, energy impact, estimated replacement cost, and observed remaining life. [ $\leq$ 12 = green, 12-24 = yellow,  $\geq$ 24 = red]
