 COLORADO STATE UNIVERSITY

# SUMMER PROGRAM

**Calling all future engineers!**

**Register for the Department of Mechanical Engineering’s high school summer program today!**

During a week-long interactive summer program on the CSU campus, high school students will participate in activities that will introduce them to the possibilities of Science, Technology, Engineering, and Mathematics (STEM). Students will utilize many of CSU’s state-of-the-art mechanical engineering laboratories, including its 3-D printing facility, mechatronics lab, and machine shop to create their designs.

**For more information  
 and to register visit:**

## Designing Your World

Ages: 14 - 16 | July 8 - 12 | 9 AM - 4 PM

Students will work on projects chosen to simulate real-world, entrepreneurial, engineering problems. Students will be tasked with identifying a problem and then design, build, test, iterate, and demonstrate a solution. In past years, students have created autonomous model cars and remote controlled submarines.
